Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of restriction in Paper No. 9 is acknowledged.

Claim 7 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected specie, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 9.

Claim Objections

Claims 8 and 9 are objected to because of the following informalities: the units "mm" should be --nm--. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 and 8-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "about" in claim 1 is a relative term that renders the claim indefinite. The term "about" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 and 8-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oeschle et al. (U.S. Pat. No. 5,484,620)(hereinafter Oeschle).

Oeschle teaches the production of a filter aid for the filtration of beverages, such as beer. The particles are produced by using fine-grained organic particles of a synthetic nature, such as, polyamides. (Col. 3, lines 2-10). The particles are sintered together to form an agglomeration and then reduced in size and sorted "within the desired granular size spectrum." (Col. 3, lines 15-21). The resultant product is useful as a filter aid, especially beverages and especially for alluvial and/or cake filtration. (Col. 4, lines 59-64) and col. 5, lines 32-35).

While the patent is silent as to the specifically claimed attributes, i.e., specific mass, shape factor, uniformity coefficient, Oeschle states that "filtering aids [] have multiple uses and that [they] have defined physical and/or chemical properties, i.e., are adapted to a respective particular application." (Col. 2, line 66 to col. 3 lines 2). Said claimed attributes are considered to be result effective variables that those in the art commonly optimize to obtain the desired filter aid. It would have been obvious to those of ordinary skill in the art to produce the filter aid of Oeschle with the claimed attributes because said attributes are commonly modified to obtain the desired results.
